Rec+onnect — Project Status

Week of February 16, 2026

Completed To Date

Service	Status	Details
Supabase Project	Done	Project ref: vfufxduwywrn..., EU West 1
Supabase CLI Auth	Done	Linked via supabase login
Git Repository	Done	Local repo, 8 commits on master
Database Schema	Done	11 tables, 6 migrations, RLS policies, triggers

The backend foundation is fully in place — database, authentication infrastructure, and version control are all operational.

Client Action Items — This Week

The following accounts need to be created under **your credentials** before the next build sessions. This avoids painful migrations later — especially OAuth providers, which break existing user sessions if moved between accounts.

1. Google Cloud Project (Required before next build)

For Google OAuth login + future Drive export.

• Go to console.cloud.google.com and sign in with your company Google account

• Create a new project named **Reconnect**

• Add me as collaborator: IAM & Admin → IAM → Grant Access → Role: **Editor**

• Send confirmation that the project is created and I have access

2. Microsoft Azure App Registration (Required before next build)

For Microsoft OAuth login.

• Go to portal.azure.com and sign in

• Search "App registrations" → New registration → Name: **Rec+onnect**

• Account type: **"Accounts in any organizational directory and personal Microsoft accounts"**

• Leave Redirect URI blank (I will configure it)

- Add me as Owner: App → Owners → Add owners → search my email

- Send confirmation that the app is registered and I'm added as owner

3. Anthropic Account (Needed soon)

For Claude AI features. Est. cost: ~$5–20/month during dev.

- Go to console.anthropic.com → Sign up

- Add a payment method (Settings → Billing)

- Create an API Key named **reconnect-dev**

- Send me the API key (sk-ant-...) — no collaborator access needed

4. Resend Account (Not urgent — but start early)

For email notifications. Domain verification can take up to 48 hours.

- Go to resend.com → Sign up with company email

- Add me as teammate: Settings → Team → Invite → Role: **Admin**

- Send confirmation I'm added

Priority: Items 1 & 2 (Google + Microsoft) are blocking — the next build sessions depend on them. Items 3 & 4 can follow shortly after.
